

getting this as follows

this is not in main but gH pages.. please suggest accordingly, kindly dont kill our time

Your screenshot confirms **your latest commit is local**, and you haven't pushed it to your GitHub repository yet.

This is normal and expected before deployment via GitHub Pages.

What to Do Next

1. Push Your Changes to GitHub:

You're on branch `main` and your local repo is ahead of `origin/main` by one commit.

Run:

```
git push
```

This will sync your latest commit to GitHub.

2. Deploy to GitHub Pages:

After pushing, deploy your latest changes with:

```
npm run deploy
```

This command will update your `gh-pages` branch and refresh your live site at:

<https://ca-1969.github.io/ADVANCE-TAX-INTEREST-CALCULATOR/>

Clarification:

- Your development work is always on `main` (or another working branch).
- The **production build** is published on the `gh-pages` branch by the deploy script—**DO NOT** commit directly to `gh-pages`.
- The workflow for any update is always:
 1. Save changes
 2. `git add .`
 3. `git commit -m "message"`
 4. `git push`
 5. `npm run deploy`

Do not run any git commands on the `gh-pages` branch. All work and commits are done on your development branch (like `main`), deployment handles the rest automatically.

If you want to see your changes live:

- Complete these two steps (`git push`, then `npm run deploy`).
- Wait 1–2 minutes, then refresh your GitHub Pages app URL.

Let me know if you face any errors with `git push` or `npm run deploy`, and I'll guide you instantly.
