

# 'Let me know if you want immediate sample code for the drop-down year selection and changeover logic!'

we would do this in next year, what you say ?

That's a sound plan—**wait until the new Finance Act and income tax rules are released next year, then add the dropdown and year-specific logic at that time.**

This approach ensures your app only includes finalized rates, due dates, and calculation changes relevant for each assessment year.

## Advantages of waiting:

- You will use the exact, officially published rates and rules for 234A, 234B, and 234C for AY 2026-27 (or new years).
- No risk of premature or outdated logic in your code.
- The dropdown structure can still be adopted easily at that time, leveraging your organized component structure and skills in React/Google Sheets integration<sup>[1]</sup>.

## When you're ready next year:

- Just let me know, and I can provide instant, up-to-date, ready-to-paste React code for the year-selector and updated calculations!

## For now:

- Continue using your current logic for AY 2025-26 and trust your formulas are compliant.
- Focus on helping users (and collecting useful lead data) with full reliability.

## Summary Table

Now	Future update
Use current logic for AY 2025-26	Add dropdown and multi-year logic after new Act

Always here for you and your "advance-tax-interest" project—reach out anytime you're ready for versioning or more enhancements!
